

How to Care For Your Baskets and Annuals

Watering

Normally we water once a day by watering slowly around the perimeter of the container. Moss baskets require side watering as the moss needs to stay hydrated too! On really hot or windy days check your containers as they might need additional hydration.

Fertilizing

All baskets are made with a slow release fertilizer and soil that encourages flowering. We recommend that you still fertilize with a liquid 20-20-20 alternating every week with a liquid 15-30-15. This gives your baskets and containers a liquid fertilizer boost every week, which will keep your baskets glorious well into autumn.

Deadheading

It is really important to remove flowers that have finished blooming. Prune them back lightly either with scissors, or your fingers. Also, if the plants are getting too long (or leggy), give them a bit of a prune so that your basket doesn't get too wild looking.

Return for Refilling

We encourage you to recycle your baskets and containers. We figure that we have kept about five tons of plastic out of the landfill with our recycling program.

Due to disease issues your baskets and containers must be returned to our garden centre EMPTY. We cannot risk infesting our soil with pests or diseases as we are entirely organic and cannot spray away problems. Thank you for understanding.
